# Wrinkle Reduction and Skin Tightening Laser Treatments

Hallmark Health Cosmetic & Laser Center is pleased to offer you laser wrinkle reduction treatments using the Candela Gentle Yag Laser, FDA approved for wrinkle reduction and skin tightening. All treatments are performed by our laser certified registered nurse.

# **Frequently Asked Questions**

### How does the laser treatment reduce wrinkles?

• The laser is passed over your skin which stimulates your bodies ability to produce collagen. This plumps up the collagen in the skin and reduces the appearance of wrinkles.

### What can I expect?

You will feel a warm sensation with each laser pulse. Candela's patented cooling system helps makes the experience more comfortable. If your skin is extremely sensitive a topical numbing agent may be used prior to treatment. You will likely experience some redness immediately after the wrinkle reduction treatment. The redness does not last long and you can continue with your day. Sunscreen should be applied.

## How many treatments will I require?

• A series of 4-5 treatments once a month is required for best results.

### What areas can I have laser wrinkle reduction treatments on?

• Common areas are the naso-labial fold (laugh lines), fine lines around the eyes (crows feet) and the wrinkle lines above the lip.

## Can I be in the sun before and during treatment?

 No, the sun and sunless tanning beds and creams must not be used four to six weeks prior to the treatment. Sunscreen must be applied after treatment.

Call (781) 213-5130 to schedule your FREE consultation today or to request more information on laser wrinkle reduction treatments or complete the <u>contact form</u> and we will contact you back by the method of your choice.
