If you have been diagnosed with uterine fibroids or are suffering from the symptoms mentioned below, you're not alone. Approximately 20-30% of women ages 35 to 55 have **symptomatic uterine fibroids**.

Some of the symptoms include heavy menstrual bleeding, painful periods, pelvic pressure, frequent urination, pain during intercourse and lower back pain.

We encourage you to attend our **FREE** seminar which will address innovative treatment options for uterine fibroids which include medication and surgery to minimally invasive procedures. The seminar will be presented by Hallmark Health physicians Wayne Wivell, MD, Associate Chief of Radiology/Co-Director of the Cardiac & Endovascular Center, OB/GYNs Donald Monteiro, MD and Steven Dakoyannis, MD.

There will be an opportunity at the end of the presentation to ask questions.

Treatment Options for Uterine Fibroids

Wednesday, January 27, 2010
